

## Mode of Action Classification

# **The Insecticide Resistance Action Committee**

Mode of Action Classification Brochure

Third Edition – February 2012

## Foreword

Effective insecticide resistance management (IRM) in conjunction with integrated pest management (IPM) is vital to global crop protection, sustainable agriculture and improved public health, and it is an essential element of responsible product stewardship.

The Insecticide Resistance Action Committee (IRAC) was formed in 1984 and works as a specialist technical group of the industry association, CropLife International, to provide a coordinated crop protection industry response to prevent or delay the development of resistance in insect and mite pests. There are now IRAC country group committees in many parts of the world researching, and responding to local resistance issues, as well as the parent IRAC International group that provides a coordinating and supporting role at the global level (see also [www.irac-online.org](http://www.irac-online.org)).

Developing new insecticides is becoming increasingly difficult and costly, so it is vital to protect those effective products in the marketplace from the development of resistance. Moreover, with fewer new insecticides being discovered and regulatory pressures reducing the number of older commercial chemistries available, the 'toolbox' of usable insecticides is being reduced, making effective IRM more important than ever. The Mode of Action Classification Scheme is a key part of IRAC's global IRM strategy.

## Mode of Action Classification

IRAC promotes the use of a Mode of Action (MoA) Classification of insecticides and acaricides as the basis for effective and sustainable resistance management. Actives are allocated to specific groups based on their target site. Reviewed and re-issued periodically, the IRAC MoA Classification Scheme provides farmers, growers, advisors, extension staff, consultants and crop protection professionals with a guide to the selection of acaricides and insecticides in resistance management programs. Effective resistance management of this type preserves the utility and diversity of available insecticides and acaricides. A complete list of the different MoA groups is shown in the following pages, followed by a breakdown of MoAs available for lepidopteran, aphids, whitefly, hoppers, mites and mosquitoes. For further information, please refer to the full IRAC MoA Classification Scheme available from the IRAC website ([www.irc-online.org](http://www.irc-online.org)).

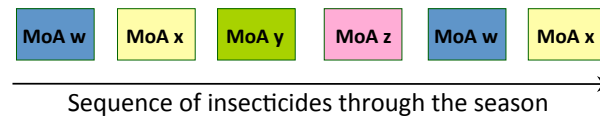

## What is Resistance?

Resistance to insecticides may be defined as *‘a heritable change in the sensitivity of a pest population that is reflected in the repeated failure of a product to achieve the expected level of control when used according to the label recommendation for that pest species’* (IRAC). Resistance arises through the over-use or misuse of an insecticide or acaricide against a pest species, and results in the selection of resistant forms of the pest and the consequent evolution of populations that are resistant to that insecticide or acaricide.

## Effective IRM Strategies: Sequences or Alternations of MoA

All effective insecticide resistance management (IRM) strategies seek to minimise the selection of resistance to any one type of insecticide. In practice, alternations, sequences or rotations of compounds from different MoA groups provide sustainable and effective IRM for insect and mite pests. This ensures that selection from compounds in the same MoA group is minimised, and resistance less likely to evolve.

Example:

Applications are often arranged into MoA spray windows or blocks that are defined by the stage of crop development together with the biology and phenology of the species of concern. Local expert advice should always be followed with regard to spray windows and timing. Several sprays may be possible within each spray window, but it is generally essential that successive generations of the pest are not treated with compounds from the same MoA group. IRAC also offers specific recommendations for some MoA groups. Metabolic resistance mechanisms may give cross-resistance between MoA groups; where this is known to occur, the above advice should be modified accordingly. For further information on the use of MoA groups and sub-groups, please see the notes at the end of the brochure and in the full MoA Classification Scheme.

## IRAC Mode of Action Classification Scheme (Version 7.2)

Main Group/Primary Site of Action	Chemical Subgroup or Exemplifying active	Active Ingredients
<b>1 Acetylcholinesterase (AChE) inhibitors</b> <i>Nerve action</i>  <i>See footnotes for further information on use of compounds between sub-groups.</i>	<b>1A</b> Carbamates	Alanycarb, Aldicarb, Bendiocarb, Benfuracarb, Butocarboxim, Butoxycarboxim, Carbaryl, Carbofuran, Carbosulfan, Ethiofencarb, Fenobucarb, Formetanate, Furathiocarb, Isoprocarb, Methiocarb, Methomyl, Metolcarb, Oxamyl, Pirimicarb, Propoxur, Thiodicarb, Thiofanox, Triazamate, Trimethacarb, XMC, Xyllycarb
	<b>1B</b> Organophosphates	Acephate, Azamethiphos, Azinphos-ethyl, Azinphos-methyl, Cadusafos, Chlorethoxyfos, Chlorfenvinphos, Chlormephos, Chlorpyrifos, Chlorpyrifos-methyl, Coumaphos, Cyanophos, Demeton-S-methyl, Diazinon, Dichlorvos/DDVP, Dicrotophos, Dimethoate, Dimethylvinphos, Disulfoton, EPN, Ethion, Ethoprophos, Famphur, Fenamiphos, Fenitrothion, Fenthion, Fosthiazate, Heptenophos, Imicyafos, Isofenphos, Isopropyl O-(methoxyaminothio-phosphoryl) salicylate, Isoxathion, Malathion, Mecarbam, Methamidophos, Methidathion, Mevinphos, Monocrotophos, Naled, Omethoate, Oxydemeton-methyl, Parathion, Parathion-methyl, Phenthoate, Phorate, Phosalone, Phosmet, Phosphamidon, Phoxim, Pirimiphos- methyl, Profenofos, Propetamphos, Prothiofos, Pyraclufos, Pyridaphenthion, Quinalphos, Sulfotep, Tebupirimfos, Temephos, Terbufos, Tetrachlorvinphos, Thiometon, Triazophos, Trichlorfon, Vamidothion
<b>2 GABA-gated chloride channel antagonists</b> <i>Nerve action</i>	<b>2A</b> Cycloidiene organochlorines	Chlordane, Endosulfan
	<b>2B</b> Phenylpyrazoles (Fiproles)	Ethiprole, Fipronil

<b>3 Sodium channel modulators</b> Nerve action  <i>See footnotes for further information on use of compounds between sub-groups.</i>	<b>3A</b> Pyrethroids Pyrethrins	Acrinathrin, Allethrin, d- <i>cis-trans</i> Allethrin, d- <i>trans</i> Allethrin, Bifenthrin, Bioallethrin, Bioallethrin S-cyclopentenyl, Bioresmethrin, Cycloprothrin, Cyfluthrin, beta-Cyfluthrin, Cyhalothrin, lambda-Cyhalothrin, gamma-Cyhalothrin, Cypermethrin, alpha-Cypermethrin, beta-Cypermethrin, theta-cypermethrin, zeta-Cypermethrin, Cyphenothrin [(1 <i>R</i> )- <i>trans</i> - isomers], Deltamethrin, Empenthrin [( <i>EZ</i> )- (1 <i>R</i> )- isomers], Esfenvalerate, Etofenprox, Fenpropathrin, Fenvalerate, Flucythrinate, Flumethrin, tau-Fluvalinate, Halfenprox, Imiprothrin, Kadethrin, Permethrin, Phenothrin [(1 <i>R</i> )- <i>trans</i> - isomer], Prallethrin, Pyrethrins (pyrethrum), Resmethrin, Silafluofen, Tefluthrin, Tetramethrin, Tetramethrin [(1 <i>R</i> )-isomers], Tralomethrin, Transfluthrin
	<b>3B</b> DDT Methoxychlor	DDT Methoxychlor
<b>4 Nicotinic acetylcholine receptor (nAChR) agonists</b> Nerve action	<b>4A</b> Neonicotinoids	Acetamiprid, Clothianidin, Dinotefuran, Imidacloprid, Nitenpyram, Thiacloprid, Thiamethoxam
	<b>4B</b> Nicotine	Nicotine
	<b>4C</b> Sulfoxaflor	Sulfoxaflor
<b>5 Nicotinic acetylcholine receptor (nAChR) allosteric activators</b> Nerve action	Spinosyns	Spinetoram, Spinosad
<b>6 Chloride channel activators</b> Nerve and muscle action	Avermectins, Milbemycins	Abamectin, Emamectin benzoate, Lepimectin, Milbemectin

Main Group/Primary Site of Action	Chemical Subgroup or Exemplifying active	Active Ingredients
<b>7 Juvenile hormone mimics</b> Growth regulation	<b>7A</b> Juvenile hormone analogues	Hydroprene, Kinoprene, Methoprene
	<b>7B</b> Fenoxycarb	Fenoxycarb
	<b>7C</b> Pyriproxyfen	Pyriproxyfen
<b>8 Miscellaneous non-specific (multi-site) inhibitors</b>	<b>8A</b> Alkyl halides	Methyl bromide and other alkyl halides
	<b>8B</b> Chloropicrin	Chloropicrin
	<b>8C</b> Sulfuryl fluoride	Sulfuryl fluoride
	<b>8D</b> Borax	Borax
	<b>8E</b> Tartar emetic	Tartar emetic
<b>9 Selective homopteran feeding blockers</b> Nerve action	<b>9B</b> Pymetrozine	Pymetrozine
	<b>9C</b> Flonicamid	Flonicamid
<b>10 Mite growth inhibitors</b> Growth regulation	<b>10A</b> Clofentezine Hexythiazox Diflovidazin <i>See footnotes for further sub-grouping information</i>	Clofentezine, Hexythiazox, Diflovidazin
	<b>10B</b> Etoxazole	Etoxazole

<b>11 Microbial disruptors of insect midgut membranes</b>	<b>11A</b> <i>Bacillus thuringiensis</i> and the insecticidal proteins they produce  <i>See footnotes for further sub-grouping information</i>	<i>Bacillus thuringiensis</i> subsp. <i>israelensis</i> <i>Bacillus thuringiensis</i> subsp. <i>aizawai</i> <i>Bacillus thuringiensis</i> subsp. <i>kurstaki</i> <i>Bacillus thuringiensis</i> subsp. <i>tenebrionis</i>  <i>Bt</i> crop proteins: (see footnote) Cry1Ab, Cry1Ac, Cry1Fa, Cry1A.105, Cry2Ab, Vip3A, mCry3A, Cry3Ab, Cry3Bb, Cry34Ab1/Cry35Ab1
	<b>11B</b> <i>Bacillus sphaericus</i>	<i>Bacillus sphaericus</i>
<b>12 Inhibitors of mitochondrial ATP synthase</b>  Energy metabolism	<b>12A</b> Diafenthiuron	Diafenthiuron
	<b>12B</b> Organotin miticides	Azocyclotin, Cyhexatin, Fenbutatin oxide
	<b>12C</b> Propargite	Propargite
	<b>12D</b> Tetradifon	Tetradifon
<b>13 Uncouplers of oxidative phosphorylation via disruption of the proton gradient</b>  Energy metabolism	Chlorfenapyr DNOC Sulfluramid	Chlorfenapyr DNOC Sulfluramid
<b>14 Nicotinic acetylcholine receptor (nAChR) channel blockers</b>  Nerve action	Nereistoxin analogues	Bensultap, Cartap hydrochloride, Thiocyclam, Thiosultap-sodium

Main Group/Primary Site of Action	Chemical Subgroup or Exemplifying active	Active Ingredients
<b>15 Inhibitors of chitin biosynthesis, type 0</b> Growth regulation	Benzoylureas	Bistrifluron, Chlorfluazuron, Diflubenzuron, Flucycloxuron, Flufenoxuron, Hexaflumuron, Lufenuron, Novaluron, Noviflumuron, Teflubenzuron, Triflumuron
<b>16 Inhibitors of chitin biosynthesis, type 1</b> Growth regulation	Buprofezin	Buprofezin
<b>17 Moulting disruptor, Dipteran</b> Growth regulation	Cyromazine	Cyromazine
<b>18 Ecdysone receptor agonists</b> Growth regulation	Diacylhydrazines	Chromafenozide, Halofenozide, Methoxyfenozide, Tebufenozide
<b>19 Octopamine receptor agonists</b> Nerve action	Amitraz	Amitraz
<b>20 Mitochondrial complex III electron transport inhibitors</b> Energy metabolism	<b>20A</b> Hydramethylnon	Hydramethylnon
	<b>20B</b> Acequinocyl	Acequinocyl
	<b>20C</b> Fluacrypyrim	Fluacrypyrim
<b>21 Mitochondrial complex I electron transport inhibitors</b> Energy metabolism	<b>21A</b> METI acaricides and insecticides	Fenazaquin, Fenpyroximate, Pyrimidifen, Pyridaben, Tebufenpyrad, Tolfenpyrad
	<b>21B</b> Rotenone	Rotenone (Derris)

<b>22 Voltage-dependent sodium channel blockers</b> <i>Nerve action</i> <i>See footnotes for further information on sub-grouping</i>	<b>22A</b> Indoxacarb	Indoxacarb
	<b>22B</b> Metaflumizone	Metaflumizone
<b>23 Inhibitors of acetyl CoA carboxylase.</b> <i>Lipid synthesis, growth regulation</i>	Tetronic and Tetramic acid derivatives	Spirodiclofen, Spiromesifen, Spirotetramat
<b>24 Mitochondrial complex IV electron transport inhibitors</b> <i>Energy metabolism</i>	<b>24A</b> Phosphine	Aluminium phosphide, Calcium phosphide, Phosphine, Zinc phosphide
	<b>24B</b> Cyanide	Cyanide
<b>25 Mitochondrial complex II electron transport inhibitors</b> <i>Energy metabolism</i>	Beta-ketonitrile derivatives	Cyenopyrafen, Cyflumetofen
<b>28 Ryanodine receptor modulators</b> <i>Nerve and muscle action</i>	Diamides	Chlorantraniliprole, Cyantraniliprole, Flubendiamide

Main Group/Primary Site of Action	Chemical Subgroup or Exemplifying active	Active Ingredients
UN Compounds of unknown or uncertain mode of action	Azadirachtin	Azadirachtin
	Benzoximate	Benzoximate
	Bifenazate	Bifenazate
	Bromopropylate	Bromopropylate
	Chinomethionat	Chinomethionat
	Cryolite	Cryolite
	Dicofol	Dicofol
	Pyridalyl	Pyridalyl
	Pyrifluquinazon	Pyrifluquinazon

**General Notes:**

- Mode of action assignments will usually involve identification of the target protein responsible for the biological effect, although groupings can be made where compounds share distinctive physiological effects and have related chemical structures.
- A compound with an unknown or controversial mode of action or an unknown mode of toxicity will be held in category 'UN' until evidence becomes available to enable that compound to be assigned to a more appropriate mode of action class.
- Inclusion of a compound in the list above does not necessarily signify regulatory approval.
- This booklet has been prepared using the most up-to-date information available to IRAC (Based on the IRAC Classification Scheme version 7.2). It is provided to user groups, grower organisations, extension personnel, regulatory authorities such as the US EPA and all those involved in resistance management, as an agreed definitive statement by the agrochemical industry on the mode of action of insecticides currently in use.
- Information is accurate to the best of our knowledge but IRAC and its member companies cannot accept responsibility for how this information is used or interpreted. Advice should always be sought from local experts or advisors and health and safety recommendations followed.

**Notes on Sub-Groups:**

In the absence of other alternatives, it may be possible to rotate compounds between sub-groups if it is clear that cross resistance mechanisms do not exist in the target populations. By definition, subgroups are established to represent distinct chemical classes with a common mode of action. Whether they should be rotated or not will depend on knowledge and experience of cross-resistance patterns, resistance mechanisms, and on the pest, crop and region considered.

Sub-groups represent distinct structural classes believed to have the same mode of action. In principle, they provide a useful level of differentiation between compounds that may bind at the same target site but are nevertheless structurally different enough that the risk of metabolic cross-resistance is lower than for close chemical analogs. Subgroups are likely to be metabolized by different enzymes and may bind differently enough within the target site that the chance of selection for either metabolic or target-site resistance is reduced compared to close analogs.

Sub-group	Notes
1A, 1B	If there are no other alternatives, compounds from groups 1A and 1B may be rotated in situations where cross-resistance mechanisms are known to be absent in the insect populations to be treated.
3A, 3B	If there are no other alternatives, compounds from groups 3A and 3B may be rotated in situations where cross-resistance mechanisms (e.g., kdr) are known to be absent in the insect populations to be treated. Because DDT is no longer used in agriculture, this is only applicable for the control of human disease vectors such as mosquitoes, because of a lack of alternatives.
4A, 4B, 4C	Although these compounds are believed to have the same target site, current evidence indicates that the risk of metabolic cross-resistance between groups 4A and 4C is low. If there are no other alternatives, compounds from groups 4A and 4C may be rotated in situations where cross-resistance mechanisms are known to be absent in the insect populations to be treated.
10A	Clofentezine, and Hexythiazox have been grouped because they commonly exhibit cross-resistance even though they are structurally distinct, and the target site for neither compound is known. Diflovidazin has been added to this group because it is a close analogue of Clofentezine and expected to have the same mode of action.
11A	Different <i>Bacillus thuringiensis</i> products that target different insect orders may be used together without compromising their resistance management. Rotation between certain specific <i>Bacillus thuringiensis</i> microbial products may provide resistance management benefits for some pests. Consult product-specific recommendations. <b>B.t. Crop Proteins:</b> Where there are differences among the specific receptors within the midguts of target insects, transgenic crops containing certain combinations of the listed proteins provide resistance management benefits.
22A, 22B	Although these compounds are believed to have the same target site, they have been sub-grouped because they are chemically distinct, and current evidence indicates that the risk of metabolic cross-resistance is low.

## Lepidoptera - Mode of Action Classification by Target Site

### Nerve & Muscle Targets

1. **Acetylcholinesterase (AChE) inhibitors**  
1A Carbamates, 1B Organophosphates
2. **GABA-gated chloride channel antagonists**  
2A Cycloidiene Organochlorines  
2B Phenylpyrazoles
3. **Sodium channel modulators**  
3A Pyrethrins, Pyrethroids
4. **Nicotinic acetylcholine receptor (nAChR) agonists**  
4A Neonicotinoids
5. **Nicotinic acetylcholine receptor (nAChR) allosteric activators**  
5 Spinosyns
6. **Chloride channel activators**  
6 Avermectins, Milbemycins
14. **Nicotinic acetylcholine receptor (nAChR) channel blockers**  
14 Nereistoxin analogues
22. **Voltage-dependent sodium channel blockers**  
22A Indoxacarb, 22B Metaflumizone
28. **Ryanodine receptor modulators**  
28 Diamides

Unknown or uncertain MoA  
Azadirachtin, Pyridalyl

### Respiration Targets

13. **Uncouplers of oxidative phosphorylation via disruption of the proton gradient**  
13 Chlorfenapyr
21. **Mitochondrial complex I electron transport inhibitors**  
21A Tolfenpyrad

### Midgut Targets

11. **Microbial disruptors of insect midgut membranes**  
11A *Bacillus thuringiensis*,  
11B *Bacillus sphaericus*

### Growth & Development Targets

7. **Juvenile hormone mimics**  
7B Juvenile hormone analogues
15. **Inhibitors of chitin biosynthesis, Type 0**  
15 Benzoylureas
18. **Ecdysone receptor agonists**  
18 Diacylhydrazines

## Aphids, Whiteflies & Hoppers - Mode of Action Classification by Target Site

### Nerve and Muscle Targets

1. **Acetylcholinesterase (AChE) inhibitors**  
1A Carbamates, 1B Organophosphates
2. **GABA-gated chloride channel antagonists**  
2A Cyclo-diene Organochlorines  
2B Phenylpyrazoles
3. **Sodium channel modulators**  
3A Pyrethrins, Pyrethroids
4. **Nicotinic acetylcholine receptor (nAChR) agonists**  
4A Neonicotinoids, 4C Sulfoxafloz
9. **Selective homopteran feeding blockers**  
9B Pymetrozine 9C Flonicamid
22. **Voltage-dependent sodium channel blockers**  
22A Indoxacarb
28. **Ryanodine receptor modulators**  
28 Cyantraniliprole

MoA Group	Aphids	Whiteflies	Hoppers
1A	X	X	X
1B	X	X	X
2A	X	X	X
2B			X
3A	X	X	X
4A	X	X	X
4C	X	X	X
7A	X	X	
7C		X	
9B	X	X	X
9C	X	X	X
12A	X	X	
15		X	
16		X	X
21A		X	
22A			X
23	X	X	
28	X	X	X
UN *	X	X	

### Respiration Targets

12. **Inhibitors of mitochondrial ATP synthase**  
12A Diafenthiuron
21. **Mitochondrial complex I electron transport inhibitors**  
21A Tolfenpyrad, Pyridaben

### Growth and Development Targets

7. **Juvenile hormone mimics**  
7A Kinoprene, 7C Pyriproxyfen
15. **Inhibitors of chitin biosynthesis, Type 0**  
15 Benzoylureas
16. **Inhibitors of chitin biosynthesis, Type 1**  
16 Buprofezin
23. **Inhibitors of lipid synthesis**  
23 Tetric & Tetric acid derivatives

### Unknown or uncertain MoA

UN Pyrifluquinazon \*

The table above lists the main mode of action groups for the control of aphids, whiteflies and hoppers. However, the availability may differ regionally due to registration status.

## Mites - Mode of Action Classification by Target Site

### Nerve & Muscle Targets

1. Acetylcholinesterase (AChE) inhibitors  
1A Carbamates, 1B Organophosphates
2. GABA-gated chloride channel antagonists  
2A Cycloidiene Organochlorines
3. Sodium channel modulators  
3A Pyrethrins, Pyrethroids
6. Chloride channel activators  
6 Avermectins, Milbemycins
19. Octopamine receptor agonists  
19 Amitraz

### Growth & Development Targets

10. Mite growth inhibitors  
10A Clofentezine, Hexythiazox  
10B Etoxazole
15. Inhibitors of chitin biosynthesis, Type 0  
15 Benzoylureas
23. Inhibitors of lipid synthesis  
23 Tetrionic & Tetramic acid derivatives

### Respiration Targets

12. Inhibitors of mitochondrial ATP synthase  
12A Diafenthiuron  
12B Organotin miticides  
12C Propargite.
13. Uncouplers of oxidative phosphorylation via disruption of the proton gradient  
13 Chlorfenapyr
20. Mitochondrial complex III electron transport inhibitors  
20B Acequinocyl, 20C Fluacrypyrim
21. Mitochondrial complex I electron transport inhibitors  
21A METI acaricides
25. Mitochondrial complex II electron transport inhibitors  
25 Cyenopyrafen, Cyflumetofen

### Unknown or uncertain MoA

Benzoximate, Bifenazate, Dicofol, Chinomethionat

## Mosquitoes - Mode of Action Classification by Target Site

### Nerve & Muscle Targets (larvae)

1. **Acetylcholinesterase (AChE) inhibitors**  
*1A Carbamates, 1B Organophosphates*
3. **Sodium channel modulators**  
*3A Pyrethrins, Pyrethroids*  
*3B DDT*
5. **Nicotinic acetylcholine receptor (nAChR) allosteric activators**  
*5 Spinosyns*

### Growth & Development Targets (larvae)

7. **Juvenile hormone mimics**  
*7A Juvenile Hormone mimics*  
*7C Pyriproxyfen*
15. **Inhibitors of chitin biosynthesis, Type 0**  
*15 Benzoylureas*
17. **Moultin disrupter, Dipteran**  
*17 Cyromazine*

### Midgut Targets (larvae)

11. **Microbial disruptors of insect midgut membranes**  
*11A Bacillus thuringiensis,*  
*11B Bacillus sphaericus*

### Nerve & Muscle Targets (adults)

1. **Acetylcholinesterase (AChE) inhibitors**  
*1A Carbamates, 1B Organophosphates*
3. **Sodium channel modulators**  
*3A Pyrethrins, Pyrethroids*  
*3B DDT*

### Active Ingredients (Alphabetical Order) with MOA Classification

Abamectin	6	Bistrifluron	15	Cyanophos	1B	Empenthrin	
Acephate	1B	Borax	8D	Cyantraniliprole	28	[(E)-Z)-(1R)-isomers]	3A
Acequinocyl	20B	Bromopropylate	UN	Cycloprothrin	3A	Endosulfan	2A
Acetamiprid	4A	Buprofezin	16	Cyfenopirafen	25	EPN	1B
Acrinathrin	3A	Butocarboxim	1A	Cyflumetofen	25	Esfenvalerate	3A
Alanycarb	1A	Butoxycarboxim	1A	Cyfluthrin	3A	Ethiofencarb	1A
Aldicarb	1A	Cadusafos	1B	Cyhalothrin	3A	Ethion	1B
Allethrin	3A	Calcium phosphide	24A	Cyhexatin	12B	Ethiprole	2B
<i>alpha</i> -Cypermethrin	3A	Carbaryl	1A	Cypermethrin	3A	Ethoprophos	1B
Aluminium phosphide	24A	Carbofuran	1A	Cyphenothrin		Etofenprox	3A
Amitraz	19	Carbosulfan	1A	(1R)- <i>trans</i> - isomers]	3A	Etoxazole	10B
Azadirachtin	UN	Cartap hydrochloride	14	Cyromazine	17	Famphur	1B
Azamethiphos	1B	Chinomethionat	UN	<i>d-cis-trans</i> Allethrin	3A	Fenamiphos	1B
Azinphos-ethyl	1B	Chlorantraniliprole	28	DDT	3B	Fenazaquin	21A
Azinphos-methyl	1B	Chlordane	2A	Deltamethrin	3A	Fenbutatin oxide	12B
Azocyclotin	12B	Chlorethoxyfos	1B	Demeton-S-methyl	1B	Fenitrothion	1B
<i>Bacillus thuringiensis</i>	11A	Chlorfenapyr	13	Diafenthiuron	12A	Fenobucarb	1A
<i>Bacillus sphaericus</i>	11B	Chlorfenvinphos	1B	Diazinon	1B	Fenoxycarb	7B
Bendiocarb	1A	Chlorfluazuron	15	Dichlorvos/ DDVP	1B	Fenpropathrin	3A
Benfuracarb	1A	Chlormephos	1B	Dicofol	UN	Fenpyroximate	21A
Bensultap	14	Chloropicrin	8B	Dicrotophos	1B	Fenthion	1B
Benzoximate	UN	Chlorpyrifos	1B	Diflovidazin	10A	Fenvalerate	3A
<i>beta</i> -Cyfluthrin	3A	Chlorpyrifos-methyl	1B	Diflubenzuron	15	Fipronil	2B
<i>beta</i> -Cypermethrin	3A	Chromafenozide	18	Dimethoate	1B	Flonicamid	9C
Bifenazate	UN	Clofentezine	10A	Dimethylvinphos	1B	Fluacrypyrim	20C
Bifenthrin	3A	Clothianidin	4A	Dinotefuran	4A	Flubendiamide	28
Bioallethrin	3A	Coumaphos	1B	Disulfoton	1B	Flucycloxuron	15
Bioallethrin S-cyclopentenyl isomer	3A	Cryolite	UN	DNOC	13	Flucythrinate	3A
Bioresmethrin	3A	Cyanide	24B	<i>d-trans</i> Allethrin	3A	Flufenoxuron	15
				Emamectin benzoate	6		

Flumethrin	3A	Methiocarb	1A	Prallethrin	3A	Tebupirimfos	1B
Formetanate	1A	Methomyl	1A	Profenofos	1B	Teflubenzuron	15
Fosthiazate	1B	Methoprene	7A	Propargite	12C	Tefluthrin	3A
Furathiocarb	1A	Methoxychlor	3B	Propetamphos	1B	Temephos	1B
<i>gamma</i> -Cyhalothrin	3A	Methoxyfenozide	18	Propoxur	1A	Terbufos	1B
Halfenprox	3A	Methyl bromide	8A	Prothiofos	1B	Tetrachlorvinphos	1B
Halofenozide	18	Metolcarb	1A	Pymetrozine	9B	Tetradifon	12D
Heptenophos	1B	Mevinphos	1B	Pyraclofos	1B	Tetramethrin	3A
Hexaflumuron	15	Milbemectin	6	Pyrethrins (pyrethrum)	3A	Tetramethrin [(1 <i>R</i> )-isomers]	3A
Hexythiazox	10A	Monocrotophos	1B	Pyridaben	21A	<i>theta</i> -cypermethrin	3A
Hydramethylnon	20A	Naled	1B	Pyridalyl	UN	Thiacloprid	4A
Hydroprene	7A	Nicotine	4B	Pyridaphenthion	1B	Thiamethoxam	4A
Imicyafos	1B	Nitenpyram	4A	Pyrimidifen	21A	Thiocyclam	14
Imidacloprid	4A	Novaluron	15	Pyriproxyfen	7C	Thiodicarb	1A
Imiprothrin	3A	Noviflumuron	15	Quinalphos	1B	Thiofanox	1A
Indoxacarb	22A	Omethoate	1B	Resmethrin	3A	Thiometon	1B
Isofenphos	1B	Oxamyl	1A	Rotenone (Derris)	21B	Thiosultap-sodium	14
Isoprocarb	1A	Oxydemeton-methyl	1B	Silafluofen	3A	Tolfenpyrad	21A
Isopropyl O-(methoxyaminothio-phosphoryl) salicylate	1B	Parathion	1B	Spinetoram	5	Tralomethrin	3A
Isoxathion	1B	Parathion-methyl	1B	Spinosad	5	Transfluthrin	3A
Kadethrin	3A	Permethrin	3A	Spirodiclofen	23	Triazamate	1A
Kinoprene	7A	Phenothrin [(1 <i>R</i> )- <i>trans</i> -isomer]	3A	Spiromesifen	23	Triazophos	1B
<i>lambda</i> -Cyhalothrin	3A	Phenthoate	1B	Spirotetramat	23	Trichlorfon	1B
Lufenuron	15	Phorate	1B	Sulfotep	1B	Triflumuron	15
Lepimectin	6	Phosalone	1B	Sulfoxaflo	4C	Trimethacarb	1A
Malathion	1B	Phosmet	1B	Sulfuramid	13	Vamidotion	1B
Mecarbam	1B	Phosphamidon	1B	Sulfuryl fluoride	8C	XMC	1A
Metaflumizone	22B	Phosphine	24A	Tartar emetic	8E	Xylcarb	1A
Methamidophos	1B	Phoxim	1B	<i>tau</i> -Fluvalinate	3A	<i>zeta</i> -Cypermethrin	3A
Methidathion	1B	Pirimicarb	1A	Tebufenozide	18	Zinc phosphide	24A
		Pirimiphos-methyl	1B	Tebufenpyrad	21A
