**Mode of Action Data Sheets**

**Group 3 Sodium channel modulators**
Keep sodium channels open, causing hyperexcitation and, in some cases, nerve block. Sodium channels are involved in the propagation of action potentials along nerve axons.

**Group 3: Sodium channel modulators** (Only major representatives of group 3A are shown)

- Bifenthrin
- Deltamethrin
- Alpha-cypermethrin
- Etofenprox
- Lambda-cyhalothrin

**3A Pyrethroids, Pyrethrins**

- Permethrin

**3B DDT, Methoxychlor**

- DDT
- Methoxychlor
